## Professional Summary

I'm a software developer with a strong interest in Generative AI and a background in Computer Science. I enjoy building AI-powered tools and experimenting with emerging tech like AI agents, RAG systems, and open-source LLMs. I'm looking to be part of innovative teams where I can keep learning, collaborate on exciting projects, and help build things that genuinely make an impact.

## Education

**Bachelor of Science in Computer Science**, Mithibai College 2021 – 2024

## Certifications

**Data Analytics and Visualization Job Simulation**, Accenture Issued Jun 2024  
**Python Programming**, Google Issued Mar 2022

## Technical Skill Set

**Languages:** Python, SQL, TypeScript, JavaScript  
**Databases:** MongoDB, Supabase, MySQL, AstraDB, Firebase  
**AI Engineering:** LangGraph, LangChain, LangSmith, AI Agents, RAG, Async AI Workflows, LLM Observability, Prompt Engineering  
**Systems & Backend:** FastAPI, Redis, RESTful APIs  
**Cloud & DevOps:** Docker, Vercel, Render, Upstash, Prometheus Metrics, CI/CD, Git, Linux, Postman

## Experience

**Junior Software Engineer**, Chintan Systems Pvt. Ltd. Jul 2025 – Present  
**Junior SWE Intern**, Chintan Systems Pvt. Ltd. Jan 2025 – Jul 2025

- Developing and maintaining a live production web application for a Financial Advisory firm using Django, FastAPI, Wagtail, and Puput. Involved across the full development lifecycle, including requirements gathering, backend API development, testing (unit, integration), and deployment.

**Lead Developer**, Browserous Apr 2023 – Dec 2024

- Led a team of 4 developers to build and deliver scalable web applications for multiple client projects. Drove technical design decisions, optimized performance, and ensured clean, maintainable code aligned with business requirements.

## Projects

**ResMe 2.0 — Production-Grade AI Resume Platform** *FastAPI, LangGraph, Redis, Docker, Prometheus*  
[GitHub](#) — [Live](#) *FE: Vercel — BE: Render — DB: Upstash*

- Engineered a **multi-agent engine** using **LangGraph** for ATS optimization and cold outreach; managed complex state and observability via **LangSmith** and **Upstash Redis**.
- Architected a resilient task orchestration layer with idempotent APIs and **automatic crash-recovery**, ensuring 100% reliability for async LLM workflows on restricted runtime tiers.
- Implemented sophisticated traffic control including **distributed rate limiting** and defensive **load shedding** to maintain system stability within free-tier resource constraints.
- Developed a **Playwright** scraping engine for JS-heavy job portals and containerized the service with **Docker** for automated CI/CD and multi-stage production builds.
- Achieved a 100% zero-cost production footprint by optimizing memory/CPU usage and implementing request-concurrency limits across **Vercel**, **Render**, and **Upstash**.

**ResMe — AI-Powered ATS Resume Optimizer (v1)** *LangChain, LangGraph, LangSmith, Hugging Face, Groq*  
[GitHub](#) — [Live](#)

- Built an AI tool to tailor resumes and cover letters to job descriptions, improving ATS keyword alignment.
- Implemented agent-based workflows with monitoring and debugging via LangSmith.

## Extra Curricular

- Committee Member of Web Design at **TEDx Mithibai College**
- Achieved Quarter-finalist status in the **Flipkart Hackathon**, outperforming over 100 competing teams.
- Selected as a Semi-finalist in the prestigious **AVISHKAR Research Convention** for presenting an innovative Waste Management Project.
